

PerformancePoint Server Dashboard: Printing Made Easy.

Fact Sheet

Solution

Great printing solutions within PerformancePoint Server 2007 and SharePoint are tough to come by. Trying to print a dashboard within Internet Explorer creates extra navigational clutter and looks terrible. We've created PerformancePoint Printing as a must have add-on solution for PerformancePoint and SharePoint, which will allow you to quickly and easily print dashboards in a snap – leaving you with a professional looking print-ready report.

How does it work? Simple, as a web part and an ActiveX control Solution a small Active X control will be installed on the end-user computer after visiting a dashboard page. Just click the "PRINT PREVIEW" button and a small dialog window will open allowing you to preview the document – then direct it to a printer of your choice.

Personalized Business Intelligence

Our solutions are based on the philosophy that Business Intelligence is not about the tools – it's about the user. We refer to it as 'Personalized Business Intelligence' and with this approach in mind, we deliver information to your employees in a way that is consistent with how they perform their jobs – leveraging the tools and software they use every day and allowing them to make informed decisions in a timely manner.

Features and Benefits

- Light weight control
- Drop PPS Print Preview web part onto any dashboard that you want printing enabled
- You can define paper sizes by default for the dashboard
- You can define the paper to be landscape or portrait
- You can define page margins for the report
- Report can be resized to print onto one page
- Print Preview allows you to see what you will get
- Simple installation onto your SharePoint 2007 or Windows SharePoint Server
- Works with all web part elements found in the main content page

Products Utilized
